Project Title: Nakagin Capsule Tower Microsite

I plan to design a single-page, responsive microsite highlighting the Nakagin Capsule Tower's unique architecture and cultural significance. The site will focus on storytelling through visuals, clean navigation, and modular content organization that mirrors the building's concept. Navigation will appear across the top for simple movement between pages but the modular blocks will be the biggest visual motif.

- Visuals: design a modular .svg that I can use to tell the story across the different sections

Introduction: Introduce the Nakagin Capsule Tower, its location in Tokyo, and its importance as an icon of the Metabolism movement. Include quick facts (architect, year built, demolition date)

Design & Concept: Explain Kisho Kurokawa's modular vision, how the two towers and 140 capsules were built, and how the design reflected futuristic ideas about adaptable living.

- Visuals: I want to put 140 blocks here that flow down on the scroll and stack

History & Fate: Cover the building's construction (1970–1972), its early use, gradual decline, and the reasons leading to its demolition in 2022.

- Visuals: Have the blocks fall to the bottom

Cultural Legacy: Explore its influence on architecture, its role in popular culture, and efforts to preserve individual capsules and digital archives.

- Visuals: the blocks build back up

Gallery & Archive: Showcase images of the building, interior capsules, and the 3D digital preservation project, along with brief captions.
